Questions answered

11/11

Question status

- High risk: 5
- Medium risk: 5
- No improvements identified: 1
- Not Applicable: 0
- Unanswered: 0

Pillar notes

-

© 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

1. How do you determine what your priorities are?

High risk

Selected choice(s)

- Evaluate internal customer needs
- Evaluate governance requirements
- Evaluate compliance requirements
- Evaluate threat landscape
- Evaluate tradeoffs while managing benefits and risks

Not selected choice(s)

- Evaluate external customer needs
- None of these

Best Practices marked as Not Applicable

-

Notes

FinTrust priorities are driven by the needs of internal operations and compliance users, together with project governance, POPIA-related data handling, security requirements, cost constraints and technical risk. The design evaluates threats such as excessive IAM permissions, public exposure, duplicate processing, failed messages and sensitive-data handling. Architectural tradeoffs are documented, including the use of af-south-1, serverless services, private RDS, SQS FIFO, RDS versus DynamoDB, and the deliberate exclusion of NAT Gateway and other unnecessary standing-cost services. External customer needs are not currently evaluated because FinTrust is a pre-production internal-facing capstone workload rather than a public banking

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

1. How do you determine what your priorities are?

service.

Improvement plan

- Evaluate external customer needs

Ask an expert

© 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

2. How do you structure your organization to support your business outcomes?

High risk

*This question has best practices marked as not applicable by the reviewer

Selected choice(s)

- Resources have identified owners
- Processes and procedures have identified owners
- Operations activities have identified owners responsible for their performance

Not selected choice(s)

- Mechanisms exist to manage responsibilities and ownership
- Mechanisms exist to request additions, changes, and exceptions
- None of these

Best Practices marked as Not Applicable

- Responsibilities between teams are predefined or negotiated

  Other: FinTrust is currently a single-owner pre-production capstone workload and is not operated by multiple teams.

Notes

FinTrust is currently a pre-production capstone workload with a single primary technical owner responsible for architecture, implementation, testing, deployment preparation, documentation and evidence collection. Ownership of project resources, procedures and operational activities is therefore clearly identified. Formal multi-team ownership, escalation and change-request mechanisms have not yet been established because the workload is not operated by

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

2. How do you structure your organization to support your business outcomes?

multiple production teams. If FinTrust moved to production, responsibilities would be divided across application, cloud/platform, security, database and operations functions with documented ownership and escalation paths.

Improvement plan

- Mechanisms exist to manage responsibilities and ownership
- Mechanisms exist to request additions, changes, and exceptions

Ask an expert

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

3. How does your organizational culture support your business outcomes?

High risk

Selected choice(s)

- Communications are timely, clear, and actionable
- Experimentation is encouraged
- Team members are encouraged to maintain and grow their skill sets

Not selected choice(s)

- Provide executive sponsorship
- Escalation is encouraged
- Team members are empowered to take action when outcomes are at risk
- Resource teams appropriately
- None of these

Best Practices marked as Not Applicable

-

Notes

FinTrust is a guided pre-production capstone focused on practical cloud engineering and continuous learning. The project encourages experimentation through iterative testing, architecture refinement, CI validation, security reviews and cost-aware design decisions. Technical skills are continuously developed through AWS implementation, Python, SQL, networking, security and operational practices. Project requirements, review findings and implementation steps are documented clearly to support timely action. Formal executive sponsorship, escalation structures and team-resourcing

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

3. How does your organizational culture support your business outcomes?

practices are not yet applicable because the workload is currently owned and operated by a single learner rather than a production organization.

Improvement plan

- Provide executive sponsorship
- Escalation is encouraged
- Team members are empowered to take action when outcomes are at risk
- Resource teams appropriately

Ask an expert

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

4. How do you implement observability in your workload?

No improvements identified

*This question has best practices marked as not applicable by the reviewer

Selected choice(s)

- Identify key performance indicators
- Implement application telemetry
- Implement dependency telemetry
- Implement distributed tracing

Not selected choice(s)

- None of these

Best Practices marked as Not Applicable

- Implement user experience telemetry

  Other: FinTrust is primarily a backend and internal compliance workload. Production end-user experience telemetry is outside the current workload scope.

Notes

FinTrust observability is designed around structured JSON logging, CloudWatch built-in and custom metrics, CloudWatch Logs Insights, operational alarms and AWS X-Ray distributed tracing. The FinTrust/ETL namespace tracks RowsValidated, RowsQuarantined, HighRiskCount and ScoringLatencyMs. Lambda Errors, Duration and Throttles provide infrastructure-level signals, while application metrics expose data-quality, risk and performance behaviour. CloudWatch alarms notify operations of Lambda failures and unusual high-risk transaction volumes. X-Ray is used to trace requests across the serverless processing path and identify latency between dependent services. User-experience telemetry is not currently

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

4. How do you implement observability in your workload?

applicable because the workload is primarily backend and internal-facing.

Improvement plan

No risk detected for this question. No action needed.

© 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

5. How do you reduce defects, ease remediation, and improve flow into production?

⚠ Medium risk

Selected choice(s)

- Use version control
- Test and validate changes
- Use configuration management systems
- Use build and deployment management systems
- Share design standards
- Implement practices to improve code quality
- Make frequent, small, reversible changes

Not selected choice(s)

- Perform patch management
- Use multiple environments
- Fully automate integration and deployment
- None of these

Best Practices marked as Not Applicable

-

Notes

FinTrust uses Git-based version control and an automated GitHub Actions verification workflow. Changes are validated with a full automated test suite against disposable PostgreSQL, Linux CPython 3.12 runtime checks, Lambda package verification and preserved test artifacts. The current CI gate has verified 178 passing tests and successful import of all five archived Lambda handlers on Linux.

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

5. How do you reduce defects, ease remediation, and improve flow into production?

Architecture, IAM, security and deployment standards are documented in the repository. Changes have been implemented iteratively in small, reviewable steps. Full automated deployment and multiple AWS environments are not yet implemented; production deployment remains controlled and approval-based.

Improvement plan

- Perform patch management
- Use multiple environments
- Fully automate integration and deployment

Ask an expert

© 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

6. How do you mitigate deployment risks?

⚠ Medium risk

Selected choice(s)

- Plan for unsuccessful changes
- Test deployments
- Employ safe deployment strategies

Not selected choice(s)

- Automate testing and rollback
- None of these

Best Practices marked as Not Applicable

-

Notes

FinTrust deployment risk is reduced through staged implementation, explicit approval boundaries, automated CI testing, Linux runtime validation and pre-deployment review of IAM, networking, cost and service dependencies. Changes are introduced incrementally rather than as a single large deployment. Failure handling and rollback behavior are designed into application logic, including database rollback, queue retries and dead-letter handling. Infrastructure deployment is still manually approved, and fully automated rollback of AWS infrastructure changes has not yet been implemented.

Improvement plan

- Automate testing and rollback

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

6. How do you mitigate deployment risks?

Ask an expert

© 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

7. How do you know that you are ready to support a workload?

⚠ Medium risk

Selected choice(s)

- Ensure personnel capability
- Ensure a consistent review of operational readiness
- Use runbooks to perform procedures
- Make informed decisions to deploy systems and changes

Not selected choice(s)

- Use playbooks to investigate issues
- Create support plans for production workloads
- None of these

Best Practices marked as Not Applicable

-

Notes

FinTrust operational readiness is assessed through staged implementation, automated testing, CI verification, architecture and security reviews, evidence collection, and explicit approval before AWS changes are deployed. The primary operator has completed guided implementation across Python, SQL, AWS, IAM, monitoring, testing and failure handling. Deployment decisions are made only after checking security, cost, service dependencies and test results. The project also maintains operational documentation and recovery procedures. Formal production support planning and fully developed incident-response playbooks are not yet complete because FinTrust remains a pre-production capstone workload.

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

7. How do you know that you are ready to support a workload?

Improvement plan

- Use playbooks to investigate issues
- Create support plans for production workloads

Ask an expert

© 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

8. How do you utilize workload observability in your organization?

High risk

Selected choice(s)

- None of these

Not selected choice(s)

- Create actionable alerts
- Analyze workload metrics
- Analyze workload logs
- Analyze workload traces
- Create dashboards

Best Practices marked as Not Applicable

-

Notes

FinTrust has a defined observability strategy using CloudWatch metrics, structured logs, Logs Insights, operational alarms, dashboards and AWS X-Ray tracing. The planned FinTrust/ETL metrics include RowsValidated, RowsQuarantined, HighRiskCount and ScoringLatencyMs. However, the current Well-Architected review is being completed evidence-first, and live AWS monitoring, trace analysis, dashboard use and alarm response have not yet been fully verified. These controls will be validated during deployment and end-to-end testing before the workload is considered operationally complete.

Improvement plan

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

8. How do you utilize workload observability in your organization?

- Create actionable alerts
- Analyze workload metrics
- Analyze workload logs
- Analyze workload traces
- Create dashboards

Ask an expert

© 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

9. How do you understand the health of your operations?

⚠ Medium risk

Selected choice(s)

- None of these

Not selected choice(s)

- Measure operations goals and KPIs with metrics
- Communicate status and trends to ensure visibility into operation
- Review operations metrics and prioritize improvement

Best Practices marked as Not Applicable

-

Notes

FinTrust has defined operational metrics and monitoring targets through CloudWatch and the FinTrust/ETL namespace, including RowsValidated, RowsQuarantined, HighRiskCount and ScoringLatencyMs. The project also defines alarm thresholds and log analysis procedures. However, routine operational review, trend communication and metric-driven prioritization have not yet been fully evidenced in the deployed environment. These practices will be validated during live deployment, monitoring and end-to-end testing.

Improvement plan

- Measure operations goals and KPIs with metrics
- Communicate status and trends to ensure visibility into operation
- Review operations metrics and prioritize improvement

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

9. How do you understand the health of your operations?
Ask an expert

© 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

10. How do you manage workload and operations events?

⚠ Medium risk

Selected choice(s)

- Use a process for event, incident, and problem management
- Have a process per alert
- Prioritize operational events based on business impact
- Automate responses to events

Not selected choice(s)

- Define escalation paths
- Define a customer communication plan for service-impacting events
- Communicate status through dashboards
- None of these

Best Practices marked as Not Applicable

-

Notes

FinTrust manages operational events according to failure type and business impact. Invalid transaction rows are quarantined without failing an entire batch, infrastructure failures trigger retries, and repeated processing failures are routed to an SQS dead-letter queue for investigation and replay. High-risk transactions trigger automated SES notifications for compliance review, while CloudWatch alarms and SNS are designed for operational failures and abnormal risk-volume conditions. This separates business events from system incidents and allows different responses based on severity. Formal team escalation paths, customer-facing incident communications and routine

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

10. How do you manage workload and operations events?

dashboard-based status communication are not yet established because FinTrust remains a pre-production capstone workload.

Improvement plan

- Define escalation paths
- Define a customer communication plan for service-impacting events
- Communicate status through dashboards

Ask an expert

© 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

11. How do you evolve operations?

High risk

Selected choice(s)

- Have a process for continuous improvement
- Implement feedback loops
- Perform knowledge management
- Define drivers for improvement
- Validate insights
- Document and share lessons learned
- Allocate time to make improvements

Not selected choice(s)

- Perform post-incident analysis
- Perform operations metrics reviews
- None of these

Best Practices marked as Not Applicable

-

Notes

FinTrust is developed through an iterative build, test, review and improvement cycle. Automated pytest testing, GitHub Actions CI, architecture reviews, security checks, deployment gates and the AWS Well-Architected assessment provide feedback that is used to identify and prioritize improvements. Project knowledge is maintained through architecture, operations, security, governance, IAM and implementation documentation, together with evidence and Git history. Improvement priorities are driven by the capstone rubric,

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

11. How do you evolve operations?

security and cost constraints, test results, deployment readiness and Well-Architected findings. Changes are validated before being treated as complete. Formal post-incident reviews and recurring live operational-metrics review meetings are not yet established because the workload remains pre-production.

Improvement plan

- Perform post-incident analysis
- Perform operations metrics reviews

Ask an expert

© 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

1. How do you securely operate your workload?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Separate workloads using accounts
- Secure account root user and properties
- Identify and validate control objectives
- Stay up to date with security threats and recommendations
- Identify and prioritize risks using a threat model
- Reduce security management scope
- Automate deployment of standard security controls
- Evaluate and implement new security services and features regularly
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

Answer the question to view the improvement plan.

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

2. How do you manage identities for people and machines?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Use strong sign-in mechanisms
- Use temporary credentials
- Store and use secrets securely
- Rely on a centralized identity provider
- Audit and rotate credentials periodically
- Employ user groups and attributes
- None of these

Best Practices marked as Not Applicable

-

Notes

-

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

3. How do you manage permissions for people and machines?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Define access requirements
- Grant least privilege access
- Define permission guardrails for your organization
- Manage access based on lifecycle
- Establish emergency access process
- Share resources securely within your organization
- Reduce permissions continuously
- Share resources securely with a third party
- Analyze public and cross account access
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

Answer the question to view the improvement plan.

10. How do you anticipate, respond to, and recover from incidents?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Identify key personnel and external resources
- Develop incident management plans
- Prepare forensic capabilities
- Develop and test security incident response playbooks
- Pre-provision access
- Run simulations
- Establish a framework for learning from incidents
- Pre-deploy tools
- None of these

Best Practices marked as Not Applicable

-

Notes

11. How do you incorporate and validate the security properties of applications throughout the design, development, and deployment lifecycle?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Perform regular penetration testing
- Deploy software programmatically
- Regularly assess security properties of the pipelines
- Train for application security
- Automate testing throughout the development and release lifecycle
- Conduct code reviews
- Centralize services for packages and dependencies
- Build a program that embeds security ownership in workload teams
- None of these

Best Practices marked as Not Applicable

-

1. How do you manage service quotas and constraints?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Aware of service quotas and constraints
- Manage service quotas across accounts and Regions
- Accommodate fixed service quotas and constraints through architecture
- Monitor and manage quotas
- Automate quota management
- Ensure that a sufficient gap exists between the current quotas and the maximum usage to accommodate failover
- None of these

Best Practices marked as Not Applicable

-

Notes

-

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

2. How do you plan your network topology?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Use highly available network connectivity for your workload public endpoints
- Provision redundant connectivity between private networks in the cloud and on-premises environments
- Ensure IP subnet allocation accounts for expansion and availability
- Prefer hub-and-spoke topologies over many-to-many mesh
- Enforce non-overlapping private IP address ranges in all private address spaces where they are connected
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

Answer the question to view the improvement plan.

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

3. How do you design your workload service architecture?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Choose how to segment your workload
- Build services focused on specific business domains and functionality
- Provide service contracts per API
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

Answer the question to view the improvement plan.

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

4. How do you design interactions in a distributed system to prevent failures?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Identify the kind of distributed systems you depend on
- Implement loosely coupled dependencies
- Make mutating operations idempotent
- Do constant work
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

Answer the question to view the improvement plan.

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

5. How do you design interactions in a distributed system to mitigate or withstand failures?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Implement graceful degradation to transform applicable hard dependencies into soft dependencies
- Throttle requests
- Control and limit retry calls
- Fail fast and limit queues
- Set client timeouts
- Make systems stateless where possible
- Implement emergency levers
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

Answer the question to view the improvement plan.

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

6. How do you monitor workload resources?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Monitor all components for the workload (Generation)
- Define and calculate metrics (Aggregation)
- Send notifications (Real-time processing and alarming)
- Automate responses (Real-time processing and alarming)
- Analyze logs
- Regularly review monitoring scope and metrics
- Monitor end-to-end tracing of requests through your system
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

Answer the question to view the improvement plan.

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

7. How do you design your workload to adapt to changes in demand?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Use automation when obtaining or scaling resources
- Obtain resources upon detection of impairment to a workload
- Obtain resources upon detection that more resources are needed for a workload
- Load test your workload
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

Answer the question to view the improvement plan.

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

8. How do you implement change?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Use runbooks for standard activities such as deployment
- Integrate functional testing as part of your deployment
- Integrate resiliency testing as part of your deployment
- Deploy using immutable infrastructure
- Deploy changes with automation
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

Answer the question to view the improvement plan.

11. How do you design your workload to withstand component failures?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Monitor all components of the workload to detect failures
- Fail over to healthy resources
- Automate healing on all layers
- Rely on the data plane and not the control plane during recovery
- Use static stability to prevent bimodal behavior
- Send notifications when events impact availability
- Architect your product to meet availability targets and uptime service level agreements (SLAs)
- None of these

Best Practices marked as Not Applicable

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

12. How do you test reliability?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Use playbooks to investigate failures
- Perform post-incident analysis
- Test scalability and performance requirements
- Test resiliency using chaos engineering
- Conduct game days regularly
- None of these

Best Practices marked as Not Applicable

-

Notes

-

13. How do you plan for disaster recovery (DR)?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Define recovery objectives for downtime and data loss
- Use defined recovery strategies to meet the recovery objectives
- Test disaster recovery implementation to validate the implementation
- Manage configuration drift at the DR site or Region
- Automate recovery
- None of these

1. How do you select the appropriate cloud resources and architecture patterns for your workload?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Learn about and understand available cloud services and features
- Evaluate how trade-offs impact customers and architecture efficiency
- Use guidance from your cloud provider or an appropriate partner to learn about architecture patterns and best practices
- Factor cost into architectural decisions
- Use policies and reference architectures
- Use benchmarking to drive architectural decisions
- Use a data-driven approach for architectural choices
- None of these

Best Practices marked as Not Applicable

-

Notes

-

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

2. How do you select and use compute resources in your workload?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Select the best compute options for your workload
- Collect compute-related metrics
- Scale your compute resources dynamically
- Understand the available compute configuration and features
- Configure and right-size compute resources
- Use optimized hardware-based compute accelerators
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

3. How do you store, manage, and access data in your workload?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Use purpose-built data store that best support your data access and storage requirements
- Collect and record data store performance metrics
- Evaluate available configuration options for data store
- Implement strategies to improve query performance in data store
- Implement data access patterns that utilize caching
- None of these

Best Practices marked as Not Applicable

-

Notes

4. How do you select and configure networking resources in your workload?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Understand how networking impacts performance
- Evaluate available networking features
- Choose appropriate dedicated connectivity or VPN for your workload
- Use load balancing to distribute traffic across multiple resources
- Choose network protocols to improve performance
- Choose your workload's location based on network requirements
- Optimize network configuration based on metrics
- None of these

Best Practices marked as Not Applicable

-

Notes

-

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

5. What process do you use to support more performance efficiency for your workload?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Establish key performance indicators (KPIs) to measure workload health and performance
- Use monitoring solutions to understand the areas where performance is most critical
- Define a process to improve workload performance
- Review metrics at regular intervals
- Load test your workload
- Use automation to proactively remediate performance-related issues
- Keep your workload and services up-to-date
- None of these

Best Practices marked as Not Applicable

-

1. How do you implement cloud financial management?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Establish ownership of cost optimization
- Establish a partnership between finance and technology
- Establish cloud budgets and forecasts
- Implement cost awareness in your organizational processes
- Monitor cost proactively
- Keep up-to-date with new service releases
- Quantify business value from cost optimization
- Report and notify on cost optimization
- Create a cost-aware culture
- None of these

Best Practices marked as Not Applicable

-

Notes

2. How do you govern usage?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Develop policies based on your organization requirements
- Implement goals and targets
- Implement an account structure
- Implement cost controls
- Implement groups and role
- Track project lifecycle
- None of these

Best Practices marked as Not Applicable

-

Notes

-

3. How do you monitor your cost and usage?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Configure detailed information sources
- Identify cost attribution categories
- Establish organization metrics
- Configure billing and cost management tools
- Add organization information to cost and usage
- Allocate costs based on workload metrics
- None of these

Best Practices marked as Not Applicable

-

Notes

4. How do you decommission resources?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Track resources over their life time
- Implement a decommissioning process
- Decommission resources
- Enforce data retention policies
- Decommission resources automatically
- None of these

Best Practices marked as Not Applicable

-

Notes

5. How do you evaluate cost when you select services?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Identify organization requirements for cost
- Analyze all components of this workload
- Perform a thorough analysis of each component
- Select components of this workload to optimize cost in line with organization priorities
- Perform cost analysis for different usage over time
- Select software with cost effective licensing
- None of these

Best Practices marked as Not Applicable

6. How do you meet cost targets when you select resource type, size and number?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Perform cost modeling
- Select resource type, size, and number based on data
- Consider using shared resources
- Select resource type, size, and number automatically based on metrics
- None of these

Best Practices marked as Not Applicable

-

Notes

7. How do you use pricing models to reduce cost?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Perform pricing model analysis
- Choose Regions based on cost
- Select third-party agreements with cost-efficient terms
- Implement pricing models for all components of this workload
- Perform pricing model analysis at the management account level
- None of these

Best Practices marked as Not Applicable

-

Notes

-

8. How do you plan for data transfer charges?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Perform data transfer modeling
- Select components to optimize data transfer cost
- Implement services to reduce data transfer costs
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

9. How do you manage demand, and supply resources?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Perform an analysis on the workload demand
- Implement a buffer or throttle to manage demand
- Supply resources dynamically
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

2. How do you align cloud resources to your demand?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Scale workload infrastructure dynamically
- Align SLAs with sustainability goals
- Optimize geographic placement of workloads based on their networking requirements
- Stop the creation and maintenance of unused assets
- Optimize team member resources for activities performed
- Implement buffering or throttling to flatten the demand curve
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

aws © 2026, Amazon Web Services, Inc. or its affiliates. All rights reserved.

3. How do you take advantage of software and architecture patterns to support your sustainability goals?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Optimize software and architecture for asynchronous and scheduled jobs
- Remove or refactor workload components with low or no use
- Optimize areas of code that consume the most time or resources
- Optimize impact on devices and equipment
- Use software patterns and architectures that best support data access and storage patterns
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

Answer the question to view the improvement plan.

4. How do you take advantage of data management policies and patterns to support your sustainability goals?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Implement a data classification policy
- Use technologies that support data access and storage patterns
- Use policies to manage the lifecycle of your datasets
- Remove unneeded or redundant data
- Use shared file systems or storage to access common data
- Back up data only when difficult to recreate
- Use elasticity and automation to expand block storage or file system
- Minimize data movement across networks
- None of these

Best Practices marked as Not Applicable

-

Notes

-

Improvement plan

5. How do you select and use cloud hardware and services in your architecture to support your sustainability goals?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Use the minimum amount of hardware to meet your needs
- Use instance types with the least impact
- Use managed services
- Optimize your use of hardware-based compute accelerators
- None of these

Best Practices marked as Not Applicable

-

Notes

-

6. How do your organizational processes support your sustainability goals?

Unanswered

Selected choice(s)

-

Not selected choice(s)

- Communicate and cascade your sustainability goals
- Adopt methods that can rapidly introduce sustainability improvements
- Keep your workload up-to-date
- Increase utilization of build environments
- Use managed device farms for testing
- None of these

Best Practices marked as Not Applicable
